2. Requirement Analysis

2.1 Solution Requirements

Project Name: Auto Ticket Classification Using Flow Designer

Team Leader: V. Veeranandhini

Members:S. Kanaga Vellammal, M. Yamuna, M. Sugapriya

Functional Requirements

S.No	Requirement	Description
1	Authentication	Authorized users should be able to access the ServiceNow system.
2	Authorization	Users should have access according to their assigned roles.
3	External Interfaces	The system should work within the ServiceNow platform.
4	Transaction Processing	The system should process newly created incident tickets.
5	Reporting	Ticket status and assignment information should be available.
6	Reporting	Flow Designer should classify tickets based on predefined conditions and assign them to the appropriate assignment group.
7	Compliance	Ticket information should be handled according to applicable access and security requirements.
8	Other	The system should reduce manual ticket classification and assignment.

Non-Functional Requirements

S.No	Category	Requirement Description	Target
1	Performance & Speed	Ticket classification should be processed quickly.	Fast processing
2	Scalability	The system should support multiple tickets.	Multiple tickets
3	Security & Data Privacy	Only authorized users should access ticket information.	Secure access
4	Reliability & Availability	The flow should execute consistently.	Reliable execution
5	Usability & Accessibility	The system should be simple for support users to operate.	Easy to use
6	Maintainability	Flow conditions should be easy to modify when required.	Easy maintenance
