3.2 Project Proposal

Project Objective

The objective of this project is to automate the classification and assignment of incident tickets using ServiceNow Flow Designer. The system is designed to reduce manual effort and improve the efficiency of ticket management.

Problem Statement

Manual classification and assignment of tickets can take additional time and may result in tickets being assigned to an inappropriate group.

Proposed Solution

The proposed solution uses ServiceNow Flow Designer to process incident tickets automatically. Based on predefined conditions, the flow classifies the ticket and assigns it to the appropriate assignment group.

Project Scope

The project focuses on:

- Creating and processing incident tickets.
- Automating ticket classification.
- Checking predefined conditions.
- Assigning tickets to the appropriate assignment group.
- Reducing repetitive manual work.

Key Features

S.No	Feature	Description
1	Ticket Creation	Allows incident tickets to be created in ServiceNow.
2	Automatic Processing	Flow Designer processes the ticket automatically.
3	Ticket Classification	Ticket information is checked using predefined conditions.
4	Assignment	Ticket is assigned to the appropriate assignment group.
5	Reduced Manual Work	Minimizes repetitive manual classification and assignment.
