7. Project Documentation

Project Name: Auto Ticket Classification Using Flow Designer

Team Leader: V.Veeranandhini
Members: S.KanagaVellammal,M.Yamuna,M.sugapriya

7.1 Project Report

1. Introduction

Auto Ticket Classification Using Flow Designer is a ServiceNow-based automation project designed to simplify the classification and assignment of incident tickets. The project uses Flow Designer to process tickets based on predefined conditions and route them to the appropriate assignment group.

2. Problem Statement

Manual ticket classification and assignment can require additional time and may lead to incorrect routing. An automated process can help reduce repetitive manual work and provide consistent ticket handling.

3. Objectives

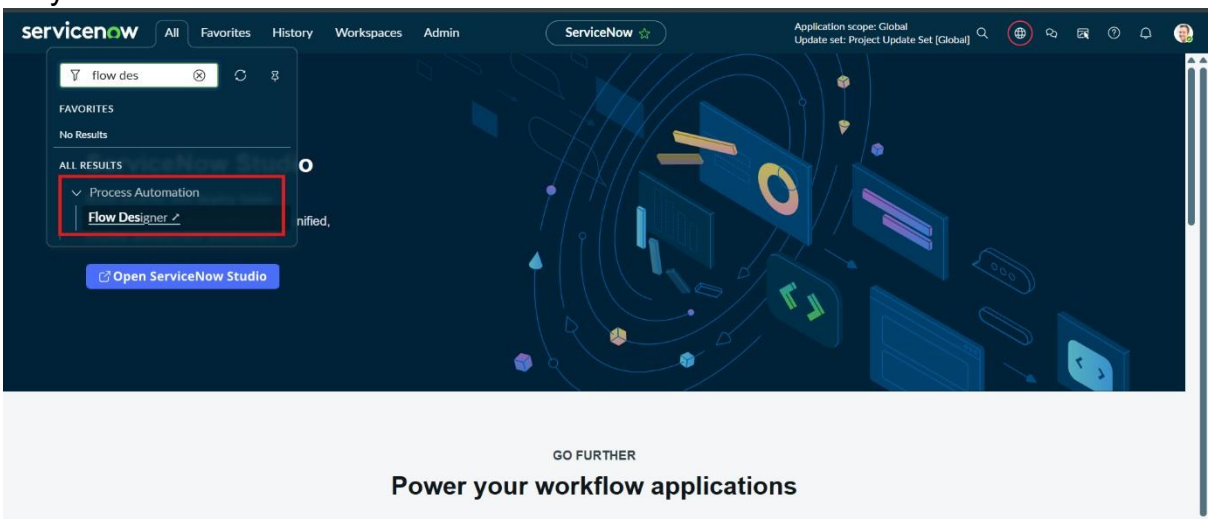

- To automate ticket classification.
- To reduce manual ticket assignment.
- To process incident tickets using Flow Designer.
- To assign tickets to the appropriate assignment group.
- To improve ticket management efficiency.

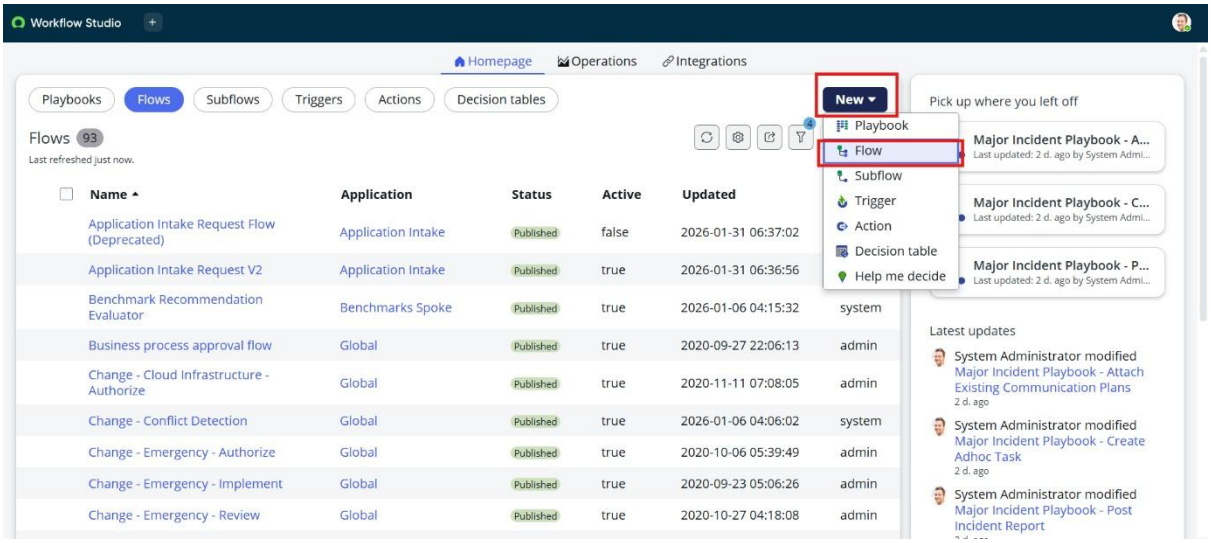

4. Technologies Used

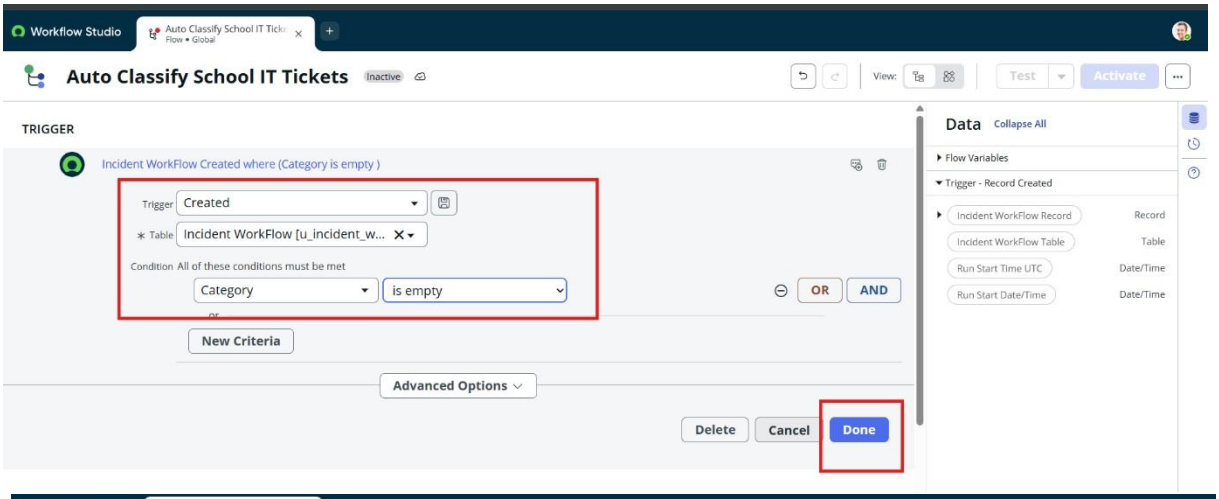

Technology / Tool	Purpose
ServiceNow	Project platform
Flow Designer	Workflow automation
GitHub	Project repository and submission
Microsoft Word / PDF	Documentation

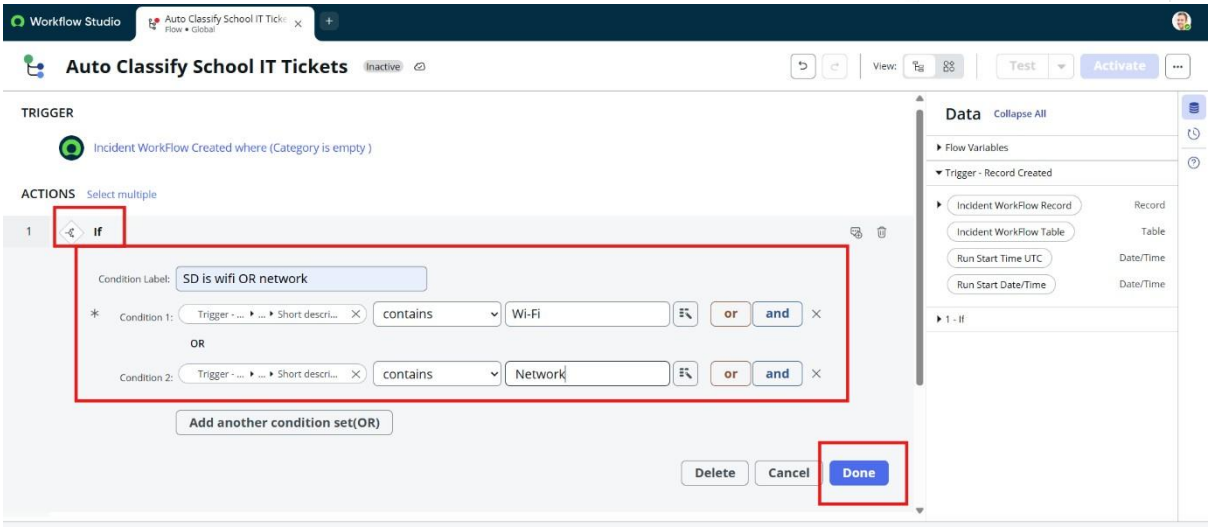

5. System Design

7. Testing

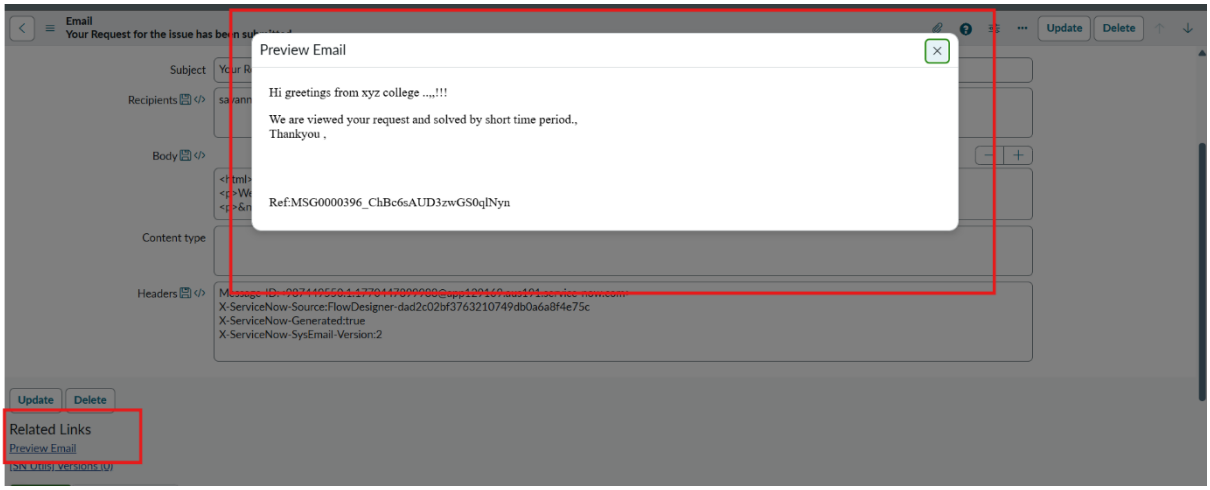

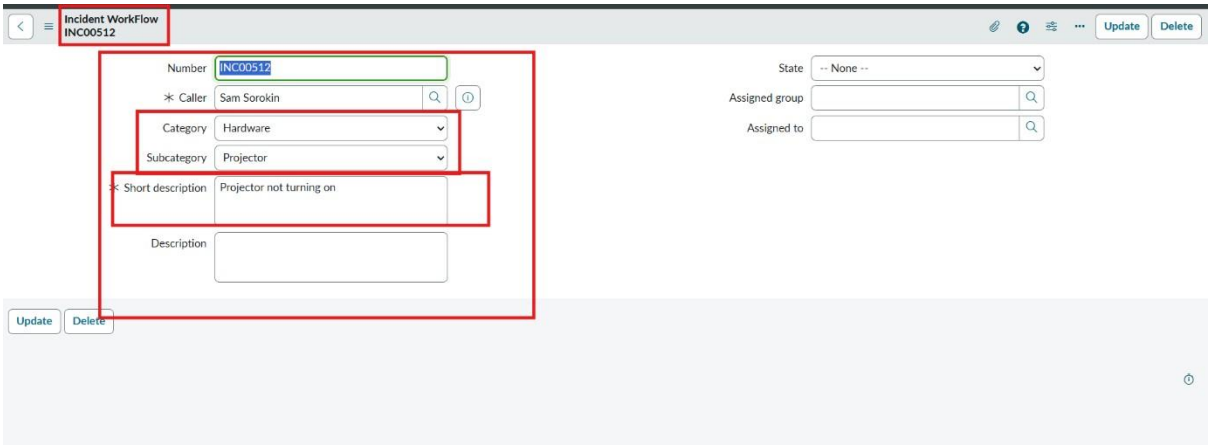

GO FURTHER

Power your workflow applications

8. Result

The developed Flow Designer workflow was tested using incident tickets. The configured flow processes the ticket based on the defined conditions and performs the required classification and assignment actions.

9. Conclusion

The project demonstrates how ServiceNow Flow Designer can be used to automate ticket classification and assignment. The automated workflow helps reduce repetitive manual activities and provides a structured approach to ticket management.

10. Future Enhancement

- More ticket categories can be added.
- More assignment rules can be configured.
- Additional automation actions can be included.
- Reporting and monitoring features can be enhanced.
